Glossary

| | |
|------------------------------------|--|
| Full Grain Leather | Quality genuine leather with no coating and minimal correction. May show slight imperfections that prove the authenticity of this natural product. |
| Nubuck Leather | Genuine leather which has been brushed in the tanning process, giving a product that is silky to the touch. Can be milled for extra softness. |
| Nappa Leather | Genuine leather that is characterized by its softness. |
| Suede Leather | Soft leather with a brushed nap that is soft to the touch. |
| Action Leather | A corrected leather that is treated with a film that improves its scuff resistance and durability. |
| Microfibre / Spandex / Mesh | Woven materials that are manufactured to give stretch and suppleness and are breathable. |
| Foam Backed Textile | Woven materials that are backed with a layer of foam. These are used as linings to provide a material that is breathable and soft to the touch. |
| Breathable Synthetic | Synthetic materials are man-made products. Improvements in technology have resulted in lining materials that are leather-like and able to transfer air and moisture away from the foot in wear. |
| Contoured Footbed | A moulded footbed that is shaped to provide underfoot support during wear. |
| Metatarsal support | The metatarsals are the long bones of the foot that connect the ankle to the toes. Moulded footbeds are shaped in a way to support these bones and connected muscles, thus reducing stress and fatigue. |
| Latex footbed | Latex in its natural state is a component of rubber. Its properties make for a material which is shock absorbent and energy returning. Used in shoes as a footbed or insole it provides durable cushioning and support. |
| Memory Foam | This is a foam that softens and moulds itself under pressure or body warmth, but never collapses. It returns to its original form ready for the next wear. Often seen used in expensive mattresses, in footwear it provides similar support and cushioning for feet. |
| Poron | Poron is a patented latex-type material that is a world leader in shock-absorption. Used as footbed or insole, it promises the wearer incomparable comfort in all-day wear. |
| EVA | A blown, lightweight soling material. |
| Resin rubber | A durable synthetic soling material used on formal, styled footwear. |
| TPR | Thermo Plastic Rubber. Used for hard-wearing outsoles. |
| Phylon | A blown, lightweight material usually used in athleisure footwear. |
| PU | Polyurethane. Characterised by its lightness and durability as an outsole material. |

* All heel heights not specified are either 25mm or lower
