

Race Horse Stable

The cleaning of race horse stables is highly specialised due to the high monetary value of the animals. Upper respiratory tract infections and leg lesions are among some of the most common health problems that race horses are very susceptible to.

Product to be used:

Refuse area cleaner with
odour control

5L | 20L

The equipment required included: Nu-CompactKleen™, hydro foamer & hard bristle brush (deck scrub). All the horse bedding needed to be removed and the passage way cleared (Picture #1). The hydro foamer was filled with Nu-CompactKleen™ and fitted with a dilution tip to allow the Nu-CompactKleen™ to be diluted at 1:100. A water line was connected to the hydro foamer by means of a quick release coupling. All surfaces, including walls and floors were foamed allowing the product contact time. Where necessary, mechanical action was used by means of the deck scrub or hard bristle broom. On completion of the cleaning process, the entire area was rinsed and resulted in remarkably cleaner stables as can be seen in picture #2 & #3.

Picture #3

Conclusion:

- Previous cleaning was done using a pungent phenol disinfectant cleaner which left a strong odour and thus required a longer period before the stables could be used. This was not applicable by making use of Nu-CompactKleen.
- The bacteria residual in Nu-CompactKleen assisted in eliminating the malodours that could attract flies and rodents which leads to disease and infection of the leg lesions.

Choosing Innu-Science products means:

-  High performance
-  Environmental friendly
-  No surface damaging
-  Cost efficiency
-  Safety for the hand-users
-  Certification by recognized environmental authorities
