■ One objective, balance between man and Earth

Created in 1992 in Canada, **Innu-Science** is the result of a meeting between two young scientists, fascinated by biotechnology and convinced of the necessity to develop more environmentally friendly **cleaning products**. Active in 25 countries, Innu-Science is confirmed today as a **leader in biotechnology**, specialising in R&D and the manufacture of professional hygiene products with seven subsidiaries, one fermentation plant and three packing plants around the world.

Innu-Science offers a **complete and effective range** of cleaning products, exceeding all environmental standards, **biodegradable**, safe for the environment and for personnel, enabling **optimised logistics**, the simplified training and control of cleaning teams, with significant **savings** in cleaning product budgets. Innu-Science has won numerous customers in the most sensitive hygiene sectors like the food and dairy industry, **restaurants, hotels, hospitals, health, education, transport** and **big cleaning companies**.

■ Commitments

Innu-Science
Nature Powered

This charter, established by our research laboratory, aims to explain in precise terms what it really means to be involved in sustainable development in cleaning products when there is no compromise.

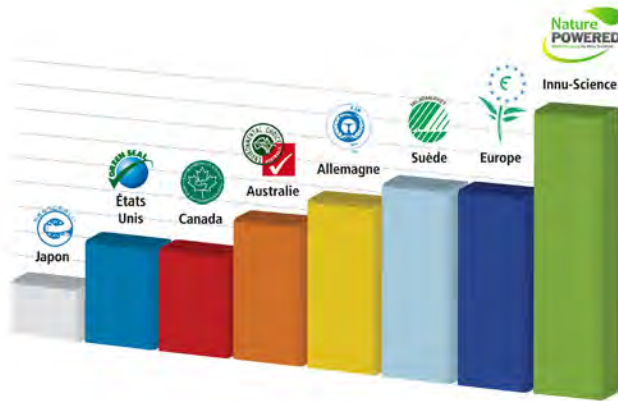

The logo guarantees users maximum effectiveness through the use of biotechnology products, containing formulations recommended by Innu-Science.

By committing to such quality criteria, Innu-Science is involved in a practical sense in the 'green turn' which our technological civilisation has to make today. A choice for a society where science and technology are not at odds with nature and the environment.

- A certified and recognized environmental respect

- Innu-Science's positioning with regard to eco-approvals

With its Enviro-Performance™ Sustainable Development label, Innu-Science far exceeds environmental accreditation standards around the world.

This policy of respect for the environment and for man has existed within Innu-Science and in the minds of its founders for more than 17 years, a long way from the "green wave" that its competitors are surfing today.

- Innu-Science and health, 0% across the range

Tolerated in the formulation of ecological cleaning products by the EC.

Formulations resulting from biotechnology.

Take a **green turn** with Innu-Science; it's a step towards protecting the environment and people at their place of work.

- Market facts

99%

of the cleaning market is **dominated by the use of harsh chemicals** with a strong negative impact on the environment and human health

98%

of the cleaning product manufacturers have developed a "**green**" range which **barely complies** with standards and approvals.

Innu-Science, concentrated pH neutral solutions

The majority of Innu-Science product ranges are delivered in an ultra-concentrated formulation, designed to be effective in low dosages.

Advantages :

- **Less storage.**
- **Deliveries are fewer and further between,** thus reducing CO2 emissions.
- **Simplified management of plastic waste** (precycling reducing by several hundred times the quantity of plastic discharged into the environment).

Innu-Science, the choice for simplicity

Take a **green turn** with Innu-Science; you will benefit from customised assistance:

- **Product kits made to measure** to suit your needs.
- **Logistics, customised** ordering and delivery.
- **Programmed installation** and **maintenance** of high precision distributors.
- **Training** of hygiene/cleaning personnel.
- **Monitoring** of product and service quality.

Innu-Science, adding value to your business

Choose Innu-Science products:

- This shows your **employees and shareholders** in your publications (annual reports, seminars etc.) that your company is **involved** in ecological and **sustainable development**.
- This gives **emphasis** to your company's "**green image**" when communicating with your customers.
